Manga downloader

Components:

-CLI
-Download service
-Reducer

CLI

Function to take a string manga name and optional chapters and call the download service.

Cli usage examples :

- to download all chapters:
```
sbt run bleach
```

- to download first 10 chapters:
```
sbt run bleach 10
```

- to download chapters from 10 to 20:
```
sbt run bleach 10 20
```

Download service
Components:
-crawler to get image urls for given chapter numbers
-function to download images

crawler usage examples:
        crawlerFirstPage(mangaName) ->
        page source for www.mangareader.net/mangaName
        list of chapters for mangaName
        crawlerForChapter(mangaName, chapterNumber) ->
        page source for www.mangareader.net/manganame ->
        list of image locations for chapterNumber
        crawler(mangaName)
        list of image locations for all chapter for mangaName

Reducer

Function to await downloaded images from all threads and create folders to sort images based on their chapter and page number.

reducer result examples -
 for ex 1:
        folder structure like

[1[1.jpg,2.jpg,3.jpg…]2[1.jpg,2.jpg,..],..600ish[1.jpg, ..]

for ex2:

folder structure like

[1[1.jpg,2.jpg,3.jpg…]2[1.jpg,2.jpg,..],..10[1.jpg, ..]

for ex3:

folder structure like

[10[1.jpg,2.jpg,3.jpg…]11[1.jpg,2.jpg,..],..20[1.jpg, ..]
